- Abbas Mohamed A00041006

The system

The system we have developed is a share price comparison system that allows users to search for stocks, compare up to two stocks, and view their historical data. The system uses external financial data providers and presents the results through charts.

System design

The system developed is layered, with a UI, a service, and data.

The layers are a presentation layer which is what the user will interact with so like a web client, a service layer with a comparison service and a chart service, and a data layer which consists of a repository, price history service, and a Database. The external data is retrieved through something like Yahoo API.

The Comparison and Chart Service are organised into compound components and encapsulate internal functionality.

The system is structured into independent services that communicate through defined interfaces.

Through diagrams and the use of a structured architecture we have made a very sustainable system, identifying clear layers to which the user can get the service needed and manage to compare the stocks needed, retrieving them in the database and giving the user the opportunity to compare them, and to also get the history of the stocks to compare in the past years, to a maximum of 2 years available to compare to.

Team Meetings

Team meetings were sat on a regular basis maximizing communication and consistency, always keeping up to date between the 2 of us that are working on this project, we clearly separated the tasks equally identifying each others strength and maximizing efficiency.

Date	Meeting Type	Attendees	Key Discussion	Tasks Assigned
20/02/2026	Whats App	Abbas, Keeley	Organising tasks	Sprint 1
25/02/2026	Whats App	Abbas, Keeley	Comp: Individual work	Ind tasks
04/03/2026	Whats App	Abbas, Keeley	Component design	Update UML diagram
11/03/2026	Whats App	Abbas, Keeley	Sprint 2 discussion	Update component diagram
17/03/2026	Whats App	Abbas, Keeley	Clarification of tasks assigned and completion of most tasks	Business concept model, Business type model, Use Case.
19/03/2026	Whats App	Abbas, Keeley	Submission discussion last checks	Clean up of the Use case and submission.
23/03/2026	Whats App	Abbas, Keeley	Updating the diagrams	Business type model, Use case and interface
25/03/2026	Whats App	Abbas, Keeley	Review	
08/04/2025	Whats App	Abbas, Keeley	Sprint 3 task assignment and detail	Diagrams and code update
15/04/25	Whats App	Abbas, Keeley	Sprint 3 task check up on progress	Progression check regarding tasks assigned

23/04/25	Whats App	Abbas, Keeley	Sprint 3 final review of tasks before submission	Submission and final review of tasks assigned
----------	-----------	------------------	--	--

Testing report

The code was tested regularly, every time a modification was made it was tested to make sure it ran correctly, copies of the code were made in order to keep an up to date tracking of where we are at, we kept the code up to date with the diagrams provided.
